Hungry Robot Pedals Expands Rebooted Lineup with the New Stargazer Reverb

Hungry Robot Pedals continues the expansion of its rebooted product lineup with the introduction of the **Stargazer**, a dual-channel ambient reverb pedal designed to create spacious, celestial soundscapes.

Following the release of the Moby Dick tape delay earlier this year, the Stargazer represents the second chapter in Hungry Robot Pedals' reimagined lineup.

Building on the foundation of its namesake, the Stargazer retains its dual-channel preset functionality of the 2014 original, allowing you to instantly switch between two banks of settings while introducing a host of new features and improvements like stereo signal processing, trails, a full wet/dry mix control and the new SPARKLE and MOD controls. The SPARKLE control blends an octave-up voice into the reverb signal, allowing you to cut through the mix with more top end presence. The MOD control introduces lush modulation and pitch bending that livens and thickens the reverb tone.

The Stargazer is available for **\$272 USD plus shipping** and is available today.
